A request for continued examination under 37 CFR 1.114 was filed in this application after appeal to the Board of Patent Appeals and Interferences, but prior to a decision on the appeal. Since this application is eligible for continued examination under 37 CFR 1.114 and the fee set forth in 37 CFR 1.17(e) has been timely paid, the appeal has been withdrawn pursuant to 37 CFR 1.114 and prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 11 September 2003 has been entered.

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-17 and 19-21 are rejected under 35 U.S.C. 102(b) as being anticipated by DE 195 31 849 A1.

Series E, pages 17-20 of the translation, teach mixing 8 parts rosin and 2 parts Methyl Palmitate (MP 30°C) at 80°C, for example, to form a resin mixture free of styrene containing polymers having a viscosity of 600mPas (0.6 Pas). This mixture is added to flooring adhesives (page 18, line 30-33), including styrene aculeate copolymers. Claim 10, etc. to an aqueous adhesive composition using the mixture of claim 1, does not exclude styrene containing polymers from the aqueous adhesive only the rosin/wax additive.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 22 is rejected under 35 U.S.C. 103(a) as being unpatentable over DE 195 31 849 A1, as applied above.

The difference between claim 22 and the example of the reference relied upon is the use of vinyl acetate in the aqueous adhesive composition. Page 3, lines 18+, of the reference teach additional monomers may be used in the polymeric adhesive portion of the adhesive composition including vinyl esters, preferably containing 2-8 carbon atoms in the ester. Acetate is included in this small group of species within the preferred embodiment. No disclosure of results particular to the use of vinyl acetate containing polymers is of record in the application file. One of ordinary skill in the art would have found it obvious to employ comonomers of vinyl acetate in the compositions of series E because the reference itself teaches that they function equivalently to the styrene acrylates of the examples.

US Patent 4714727 cited herein as relevant to the instant claims but, no more than aggregative to the references relied upon in view of the claims as currently presented.
